

PEPFAR

U.S. President's Emergency Plan for AIDS Relief

PEPFAR Update

Katy Godfrey | 9/19/2022

19 YEARS OF SAVING LIVES THROUGH AMERICAN GENEROSITY AND PARTNERSHIPS

Summary of PEPFAR's Latest Global Results (FY22/Q2)

Reached 90/90/90
treatment targets

Women, men, and
children on life-saving
treatment – 17.2M in
2021

Babies born HIV free due to
PEPFAR investments¹

Increase in investments
in vulnerable
populations²

Specifically during COVID...

Increase in multi-month
dispensing of life-saving
ARVs

People using HIV self
tests in FY21 – 200%
increase since FY19

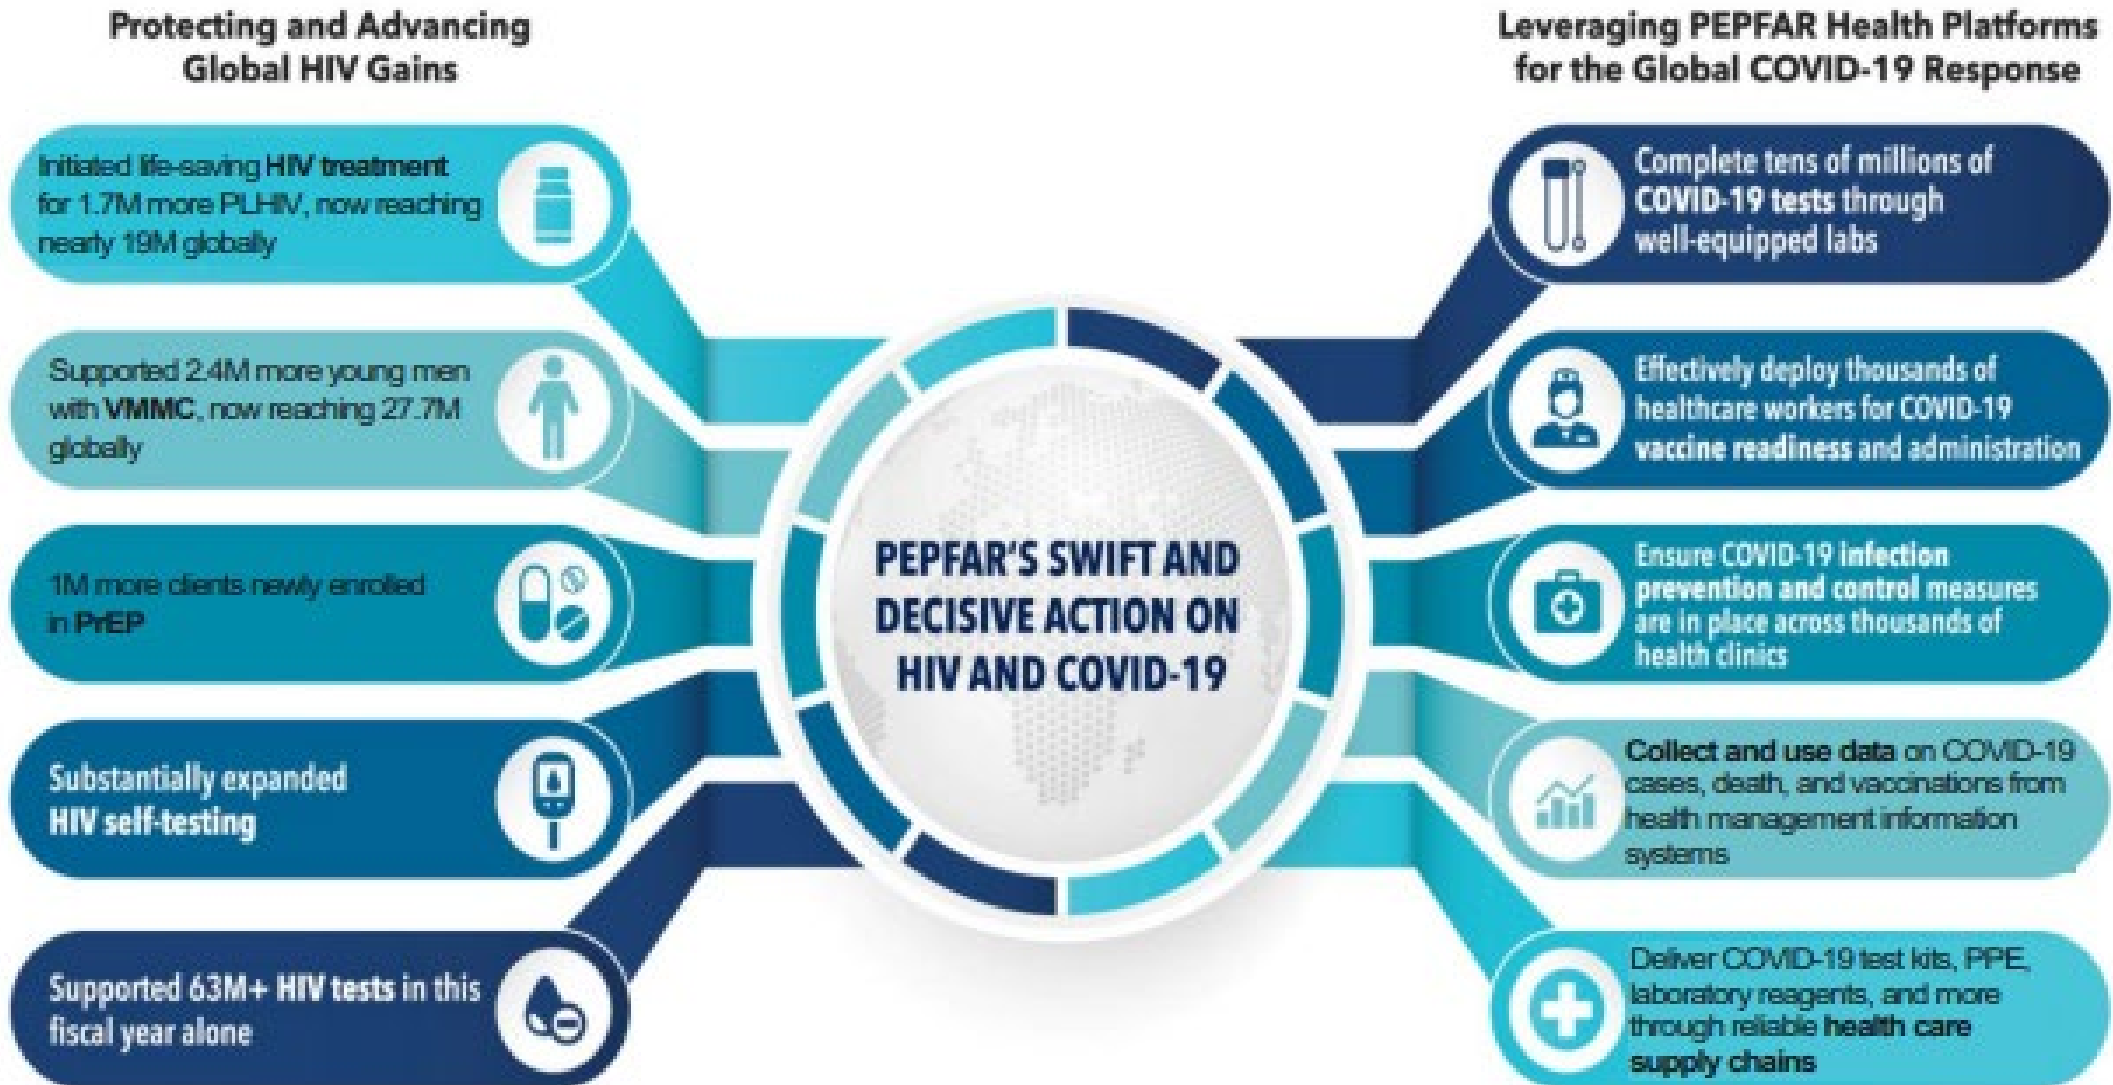

New clients on PrEP
since FY20 – only 300K
in FY20

¹ Includes both reduction in mother-to-child transmission, and the reduction of incidence and prevalence among AGYW, women of childbearing age, and adult men

² Nearly 15% key populations, 20% for adolescent girls and young women, and 30% for children planned for FY23 relative to FY22

Sustaining HIV Gains-responding to COVID

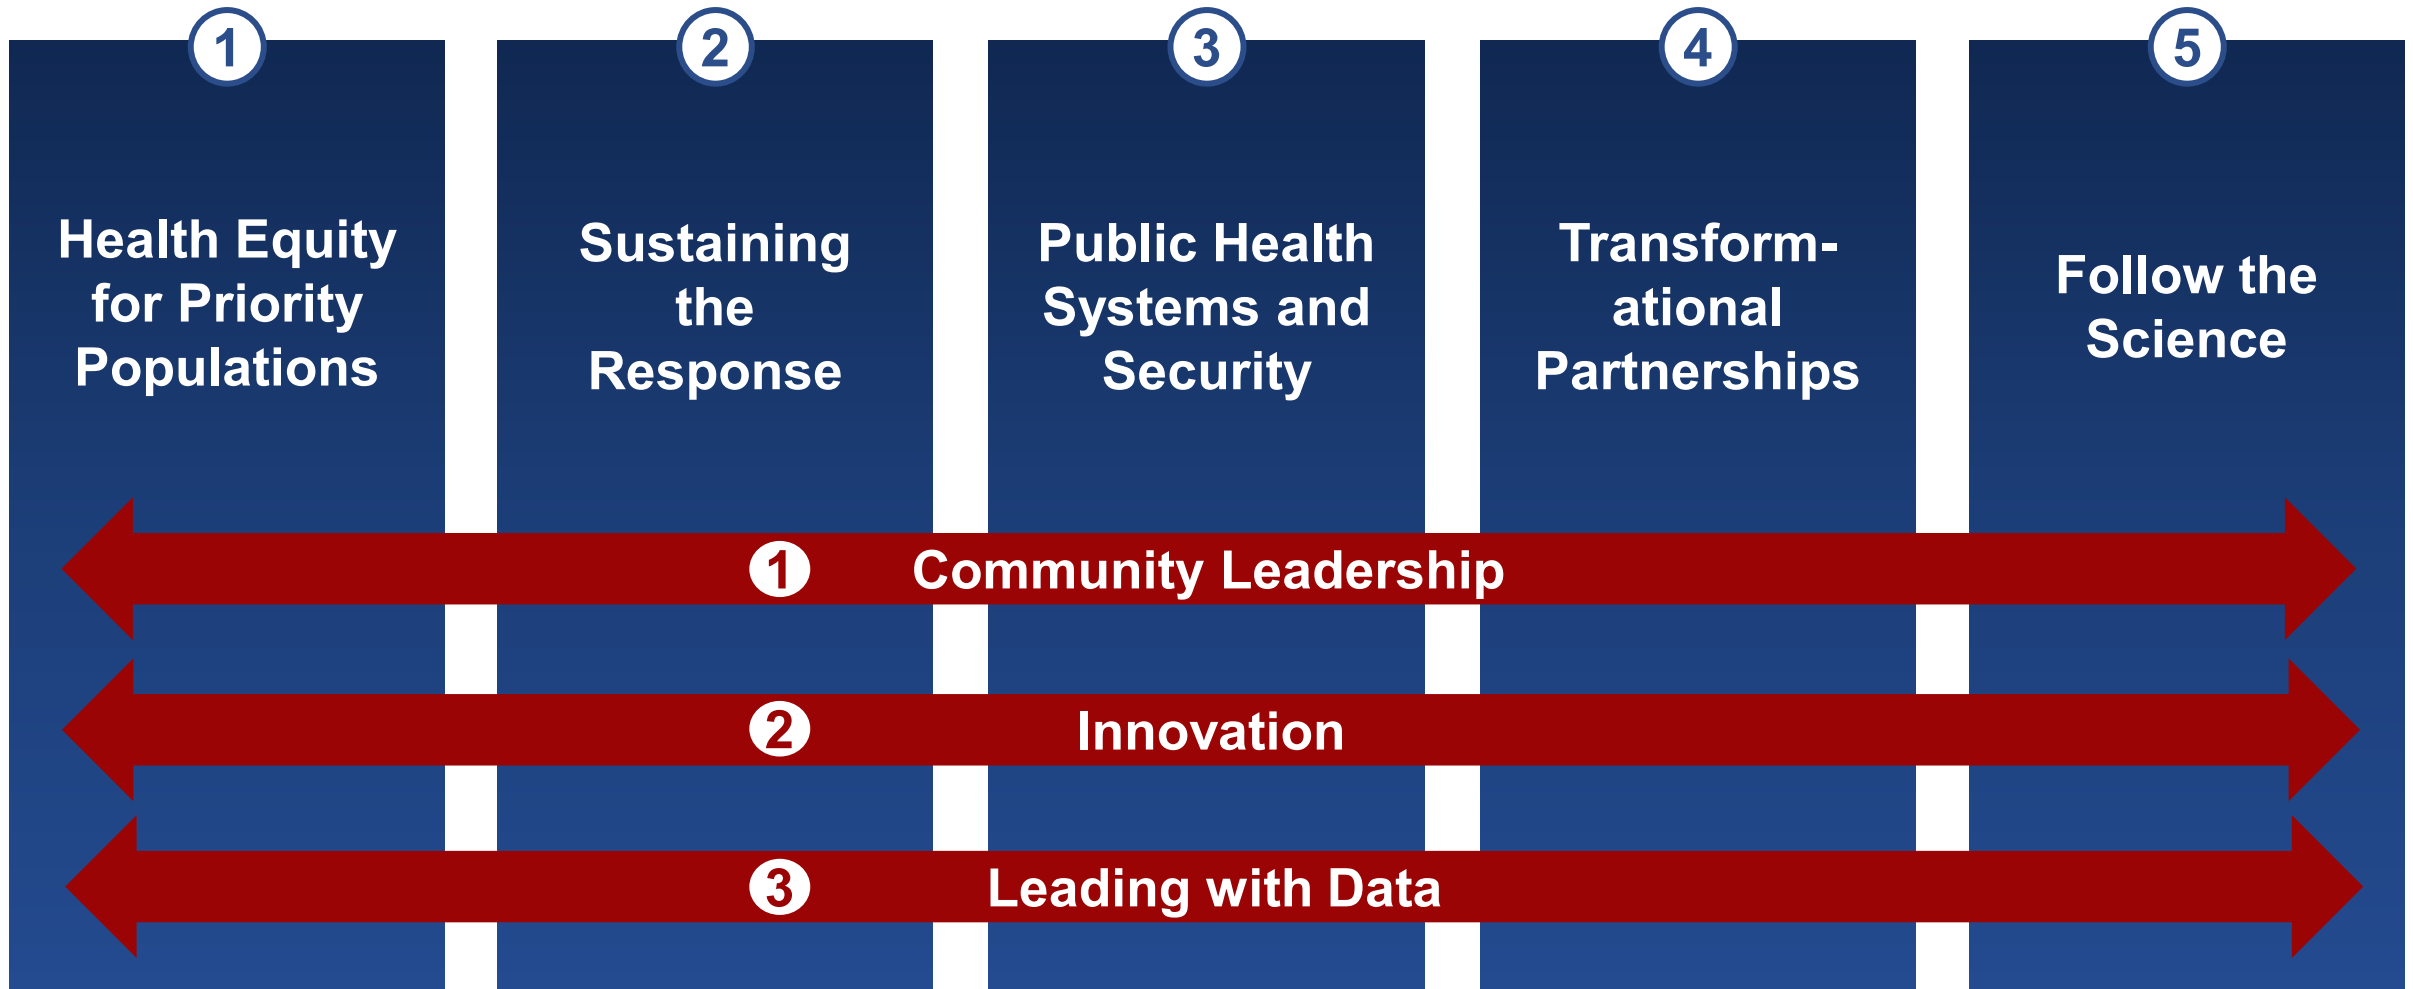

Responding to COVID-19: the PEPFAR Platform

- PEPFAR offers a care delivery platform to respond to HIV and COVID-19
- Strong PEPFAR supported USG teams and local implementing partners on the ground
- PEPFAR health systems investments (>\$15 billion) have strengthened the systems that drive responsive, resilient and enduring health care
 - **3000+ laboratories**
 - **70,000 health care facilities (granular data and access to people)**
 - **290,000+ health care workers**
 - **Expansive health care commodities supply chain**
- PEPFAR has been proactively leveraging the platform to support COVID-19 screening, diagnostics, infection prevention and control and vaccine readiness and administration

"[PEPFAR] investments protect against more than HIV/AIDS. They've helped keep deadly diseases -- including Ebola, H1N1, and cholera -- from raging out of control. And they've been vital in the ongoing fight against COVID-19." – Secretary Blinken, April 1, 2021

Strategic Vision

| Strategic Pillars & Enablers

2 Sustainability | How

1

Political

*Empowering **regional health bodies** (e.g., PAHO, ACPHEEN, Gulf CDC, AUC/Africa CDC etc.) and **Mobilize Heads of State** to elevate HIV/AIDS to the top of their development agendas*

2

Programmatic

***Reimagine local partnerships** by directly strengthening the organizational health of local partners and reforming the donor-led ways of working to reduce management burdens on our local partners*

3

Financial

*Advocate for **increased national funding** for HIV and broader health program, and support strengthening government and private co-financing, and financial management capabilities*

4

Community

*Embed **strategic and sustained community leadership (including women and KP-led)** in all elements of PEPFAR (i.e., priority setting, funding allocations, program design, results management)*

New Infections and Prevention

2025 targets require a much steeper decline in new infections

FIG. 1.01a. Number of new HIV infections, global, 1990–2021, and 2025 target

2025 new infections target

~370,000

2020 Actual

~1,500,000

65% in key populations, 50% females worldwide

AGYW are 10% of population and 25% of new infection in SSA

Annual new Infections decreased by 54% at the peak and 32% between 2010 and 2021.

Reaching the 370,000 target will require a 75% reduction over the next four years.

Prevention:

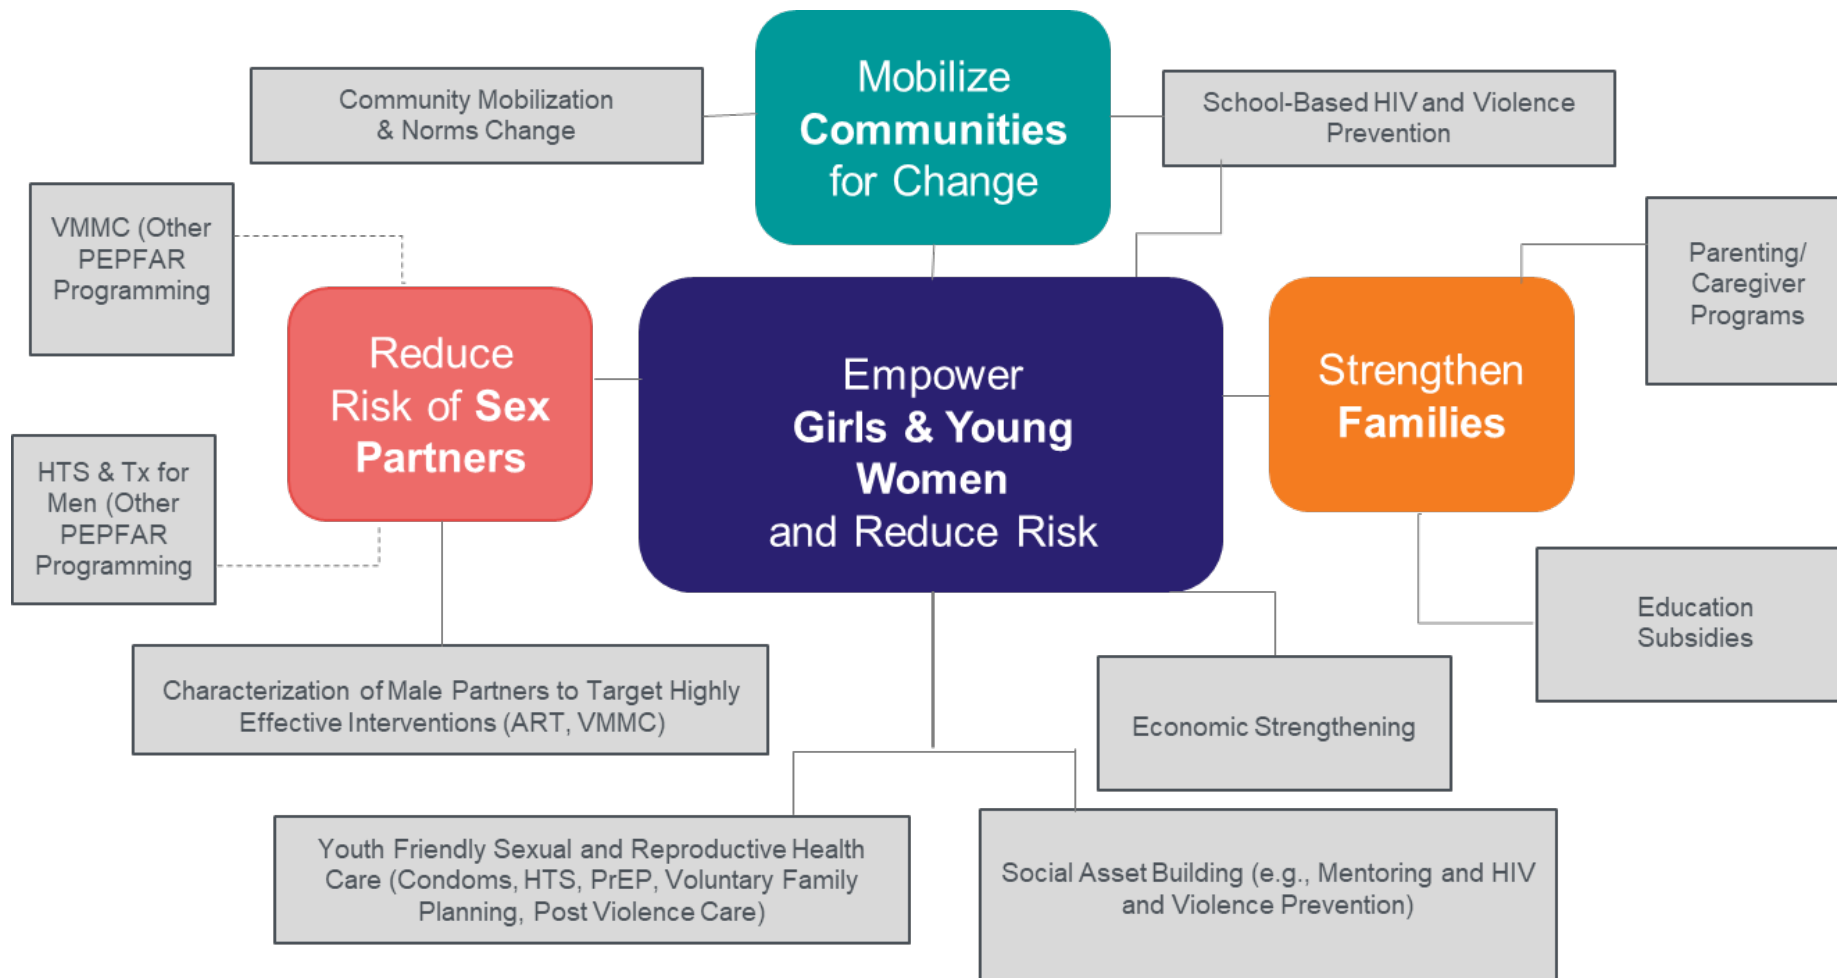

- Multimodal
- Biomedical
 - Circumcision
 - PrEP/PEP

The DREAMS Partnership

“DREAMS” is a comprehensive prevention approach that includes structural, behavioral, and biomedical interventions.

DREAMS Core Package

DREAMS FY22 Q2 Results

Over 2 million girls and young women
reached by DREAMS

Over **745,000**
completed at
least the
primary
package of
DREAMS
services

Over
1.2 million
received an
HIV and
violence
prevention
curriculum

Over **519,000**
received
enhanced
economic
empowerment
through skills
training and
bridge to
employment

More than **293,000**
were supported to
stay in school

New PrEP initiations have grown in ambition and performance

Treatment

- Maintain continuity
 - ✓ viral suppression
- Improve mortality
- Improve health quality of life

Treatment

Sustainability: HIV treatment is a life-long endeavor:

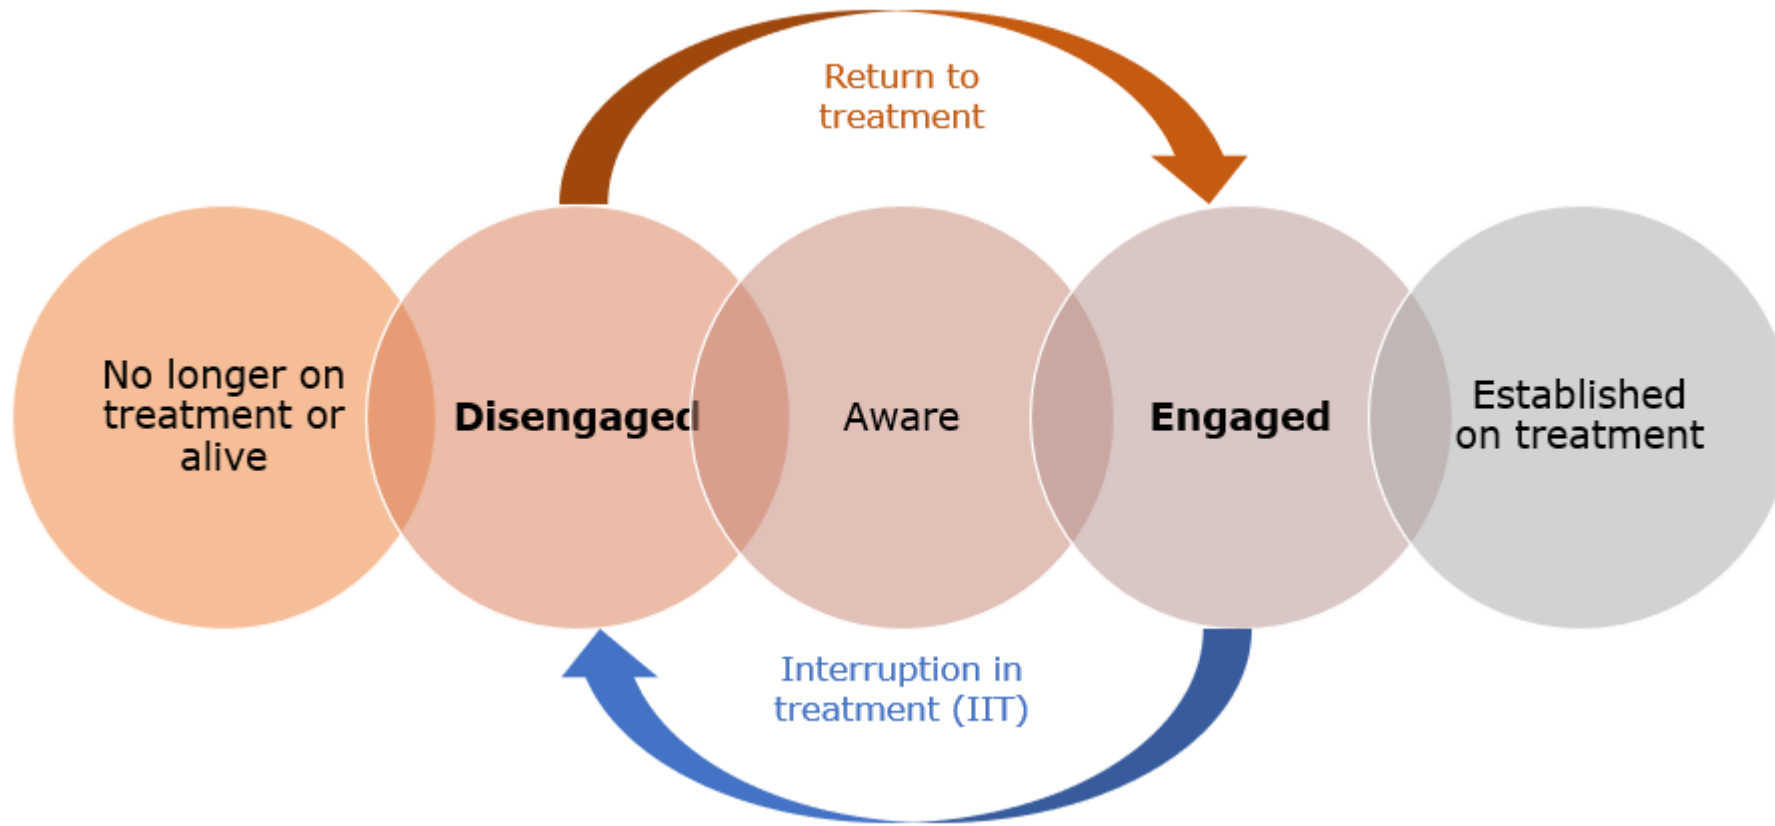

The PEPFAR model: simple, scalable, task shifting.

Person centered: the right care, from the right provider at the right time.

Focus on improving the lifespan and the “health-span”

- Prevent disengagement
- Target the groups with the highest mortality
 - People over 50
 - Children under 5 and especially under 1
 - People with advanced HIV disease

Engagement and reengagement in ART is not a linear process

Numbers and proportions of interruptions per 100 persons on treatment

Cycle of interruptions and returns to ART.

Aging population

Aging population over time

Viral suppression-the third 90

VL suppression by sex:

Women

Men

AFRICOS-comorbidities.

Preliminary program data from Ethiopia

- Facility based chart review of individuals over 40
- Not comprehensive, charts randomly selected at several sites.
- Looked for HTN, DM, hyperlipidemia, renal insufficiency and obesity and others
- Likely underestimated prevalence of these conditions-data not collected routinely or noted in charts
- HTN occurred in 8.2%, DM 5.3%, CRI 7.3%
- At least 1 NCD: 22%

Mortality related to COVID-19

Person-centered care of the older adult
